

1. BLGM100 Introduction to Computer Engineering

A series of seminars are held in current topics and areas of specialization in Software Engineering. Speakers are invited from different departments of EMU including Computer Engineering Department or other International Universities, Industry and Consulting firms, to deliver seminars in all aspects of engineering that are not normally covered in the lecture courses.

Credits: (0 / 0 / 2) 0

Prerequisites: None

ECTS: 1

Abbreviated Title: Introduction to Computer Engineering

Category: Faculty

Core Course

Teaching Language: Turkish

Keywords: Computer Engineering

Department offering the course: Computer Engineering

2. BLGM107 Foundations of Computer Engineering

Design of computer algorithms with pseudo-code to solve problems, analyze engineering related problems using computer. Basic elements of a high level computer programming language: Data types, constants and variables, arithmetic and logical operators and expressions. Fundamental components of Python programming language: Storing and manipulating user-input data, design and use of selection structures, design and use of repetition structures, lists and other data structures, functions, modular designs, dictionaries and sets, file input/output.

Credits: (4 / 1 / 0) 4

Prerequisites: None

ECTS:7

Abbreviated Title: Foundations of Computer Engineering

Category: University

Core Course

Teaching Language: Turkish

Keywords: Computer Engineering

Department offering the course: Computer Engineering

3. BLGM112 Programming Fundamentals

An overview of C programming language. Sequential structures, data types and classes of data, arithmetic operators and expressions, assignment statements, type conversions, simple I/O functions (printf, scanf, fprintf, fscanf, gets, puts, fgets, fputs). Selective structures, relational operators, logical operators, conditional expression operator, conditional statements (if, switch). Repetitive structures, while, do-while, for loops, loop interruptions (goto, break, continue). Functions, function definitions and function calls. Arrays, array declaration, array initialization, arrays as function arguments. Pointers, basics of pointers, functions and pointers arrays and pointers, strings and pointers. Library functions for processing strings, pointer arrays.

Credits: (4 / 1 / 0) 4

Prerequisites: BLGM107

ECTS:7

Abbreviated Title: Programming Fundamentals
Teaching Language: Turkish

Category: Area Core Course

Keywords: Computer programming

Department offering the course: Computer Engineering

4. BLGM211 Object-Oriented Programming

Basics of Java programming language. Introduction to object-oriented programming. Classes, objects, methods, access modifiers (private, public, protected). Class derivation, abstract classes, interfaces, static class members. Inheritance, encapsulation, polymorphism. Object construction and destruction, namespaces, exception handling. Function overloading and overriding, container classes, template classes. Unified Modeling Language (UML) class diagrams.

Credits: (4 / 1 / 0) 4
ECTS:7

Prerequisites: BLGM112

Abbreviated Title: Object-Oriented Programming
Course Teaching Language: Turkish

Category: Area Core

Keywords: Object-oriented programming

Department offering the course: Computer Engineering

5. BLGM223 Digital Logic Design

Binary Systems (Binary Numbers, Octal and Hexadecimal Numbers, Number Base Conversions, Complements, Signed Binary Numbers, Binary Codes, Binary Logic). Boolean Algebra and Logic Gates (Basic Definitions, Basic Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms. Simplification of Boolean Functions (The Map Method, Two- Three- and Four-Variable Maps, Product of Sums Simplification, NAND and NOR Implementation, Other Two-Level Implementations, Don't-Care Condition). Combinational Logic (Design Procedure, Adders, Subtractors, Code Conversion, Analysis Procedure, Multilevel NAND Circuits, Multilevel NOR Circuits, Exclusive-OR Functions). MSI Components (Binary Adder and Subtractor, Decimal Adder, Decoders and Encoders, Multiplexers). Synchronous Sequential Logic, Flip-Flops, Analysis of Clocked Sequential Circuits. Design of Clocked Sequential Circuits: Design Procedure, State Reduction, State Assignment and FF Excitation Tables.

Credits: (4 / 1 / 0) 4
ECTS: 7

Prerequisites: MATE163

Abbreviated Title: Digital Logic Design
Teaching Language: Turkish

Category: Area Core Course

Keywords: Digital Logic Design

Department offering the course: Computer Engineering

6. BLGM224 Digital Logic Systems

Registers. Design and analysis of synchronous counters. Design and analysis of ripple counters. Algorithmic state machines (ASM). Design of control and datapath units using

ASM. Introduction to computer architecture. A generic RISC processor architecture and its associated Assembly programming language.

Credits: (4 / 1 / 0) 4

Prerequisites: BLGM223

ECTS:7

Abbreviated Title: Digital Logic Systems

Category: Area Core Course

Teaching Language: Turkish

Keywords: Digital Logic Systems

Department offering the course: Computer Engineering

7. BLGM226 Electronics for Computer Engineers

Circuits, currents and voltages, power and energy, Kirchoff's current and voltage laws. Circuit elements and circuits. Resistive circuits: resistance in series and parallel, resistive network analysis by series and parallel equivalents, node and mesh analysis. Thevenin and Norton equivalents. Superposition. Inductance and Capacitance, physical characteristics, practical capacitor and inductors. Basic diode concepts: Zener diode, Ideal diode model, rectifiers and waveshaping. Basic amplifier concepts, cascaded, ideal, and differential amplifiers, offset voltage, bias current and offset current. Bipolar Junction Transistors: Current and voltage relationship, common emitter characteristics, pnp BJT LargeSignal DC Circuit models. Common Emitter amplifiers. Emitter Follower. Operational Amplifiers: ideal OPamp, summing point, inverting and noninverting amplifiers, Nonlinear imperfection, Differential and Instrumentation Amplifiers, Integrators and Differentiators. Logic Circuits: Basic concepts: TTL and CMOS implementation of logic gates.

Credits: (4 / 1 / 0) 4

Prerequisites: MATE241

ECTS:7

Abbreviated Title: Electronics for Computer Engineers Category: Area Core Course

Teaching Language: Turkish

Keywords: Electronics for Computer Engineers

Department offering the course: Computer Engineering

8. BLGM231 Data Structures

Primitive data structures. Arrays of structures, self-referential structures, structures and functions in C programming language. Dynamic memory allocation. Stack as an abstract data type, primitive stack operations, representing the stack in C. Infix, postfix, and prefix notations; infix-to-postfix conversion using the stack. Recursion and recursive function definition. Recursion versus iteration; examples: factorial function, Fibonacci sequence, binary search, the towers of Hanoi problem. The queue as an abstract data type, C implementation of queues. Linked Lists: inserting and removing nodes from a list, linked list implementation using dynamic variables in C, circular and doubly linked lists, linked implementation of stacks and queues. Binary trees, operations on binary trees, tree traversals, binary search trees, deleting nodes from a binary search tree, tree representation of expressions. Sorting, the O notation, bubble sort, quick sort.

Credits: (4 / 1 / 0) 4

Prerequisites: BLGM112

ECTS:6

Abbreviated Title: Data Structures
Teaching Language: Turkish

Category: Area Core Course

Keywords: Data structures

Department offering the course: Computer Engineering

9. BLGM242 Operating Systems

Operating system definition, simple batch systems, multiprogramming, time-sharing, personal computer systems, parallel systems, introduction to process, process scheduling, operations on processes, cooperating processes, interprocess communications, interrupts, basic concepts of threads, process synchronization, critical-section problem, atomic instructions, semaphores, synchronization problems, CPU scheduling, scheduling criteria and algorithms, multiple processes and real-time scheduling, algorithm evaluation, deadlocks, characterization and handling of deadlocks, deadlock prevention avoidance and detection, deadlock recovery, memory management and virtual memory, address spaces, swapping, memory allocation, paging, segmentation.

Credits: (4 / 1 / 0) 4
ECTS:7

Prerequisites: BLGM112

Abbreviated Title: Operating Systems
Teaching Language: Turkish

Category: Area Core Course

Keywords: operating systems

Department offering the course: Computer Engineering

10. BLGM312 Software Engineering

The software life cycle and the phases in software development: Project scheduling, feasibility study, analysis, specification, design, implementation, testing, quality assurance, documentation, maintenance. Management issues: Planning, organization, control. Also included are formal specification techniques, structured programming, modular system design and other current issues.

Credits: (4 / 1 / 0) 4
ECTS:7

Prerequisites: BLGM211

Abbreviated Title: Software Engineering
Teaching Language: Turkish

Category: Area Core Course

Keywords: Software Engineering

Department offering the course: Computer Engineering

11. BLGM321 Signals and Systems for Computer Engineers

Fundamental concepts of signals and systems for computer engineers with focus on discrete-time systems. Sinusoids, complex numbers, spectrum representation, sampling, frequency response, filters, and the z-Transform. Digital signal processing of multimedia signals.

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM226

Abbreviated Title: Signals and Systems for Comp. Eng. Category: Area Core Course
Teaching Language: Turkish

Keywords: Signals and Systems for Computer Engineers

Department offering the course: Computer Engineering

12. BLGM325 Computer Architecture and Organization

Introduction to RISC architecture, MIPS Instruction set: Representing instructions in the computer, Linkers, Supporting procedures in computer hardware, Passing the arguments to a procedure, Constant or immediate operands in MIPS, Addressing in branches and jumps in MIPS, MIPS addressing modes, MIPS assembly program. Integer Arithmetics: Negative number representations, Addition and subtraction, Logic operations, Constructing the Arithmetic Logic Unit (ALU), Multiplication algorithms, Division algorithms, Floating point arithmetic algorithms. Design Performance Measures: CPU performance, Evaluating the performance. Processor Data path: Logic conventions and clocking, MIPS single clock cycle implementation: (Building a datapath), The simple implementation scheme, The multiple clock cycle implementation, Designing the control unit for the multiple clock cycle implementation: Finite state machines (FSM) and Microprogramming. Enhancing Performance with Pipelining: A pipelined datapath, Pipelined control, Data hazards, Control for data hazards, Reducing data hazards, Branch hazards, Exceptions, Performance of pipelined systems.

Credits: (4 / 1 / 0) 4

Prerequisites: BLGM224

ECTS:7

Abbreviated Title: Computer Architecture and Organization Category: Area Core Course
Teaching Language: Turkish

Keywords: Computer Architecture and Organization

Department offering the course: Computer Engineering

13. BLGM326 High End Embedded Systems

Application areas, common characteristics, and challenges in embedded system design. Requirement specification, models of computation and modeling methods such as automata, and statecharts, data flow modeling. Embedded system hardware, ASICs, processors, memories, communication, conversion between analog and digital inputs and outputs, sampling, and actuators, secure hardware. Embedded operating systems, general requirements, RTOS, virtual machines, real time databases. IoT projects and implementation. Evaluation and validation, performance evaluation, energy and power models, simulation, rapid prototyping, emulation. Test, test pattern generation, evaluation of test patterns, design for testability.

Credits: (4 / 1 / 0) 4

Prerequisites: BLGM224

ECTS:6

Abbreviated Title: High End Embedded Systems Category: Area Core Course
Teaching Language: Turkish

Keywords: High End Embedded Systems

Department offering the course: Computer Engineering

14. BLGM342 Client / Server Programming

This course is an introduction to the tools, technologies, and languages used for the design and implementation of Web applications. This course covers the following topics: Hypertext Markup Language (HTML), a client side Web programming language (e.g. JavaScript), multithreaded programming, a server side Web programming language (e.g. ASP.Net) and Graphical User Interface (GUI). Group projects will also be given in the course.

Credits: (4 / 1 / 0) 4
ECTS:7

Prerequisites: BLGM231

Abbreviated Title: Client / Server Programming
Course Teaching Language: Turkish

Category: Area Core

Keywords: Client / Server Programming

Department offering the course: Computer Engineering

15. BLGM344 Computer Networks

Introduction to fundamental concepts of computer networks. Basic performance and engineering tradeoffs in the design and implementation of computer networks. Network hardware/software, protocols and layers, OSI and TCP/IP reference models. Data link layer design issues including encoding, framing, error detection, reliable delivery, and multiple accesses. Multiplexing, switching, and routing. LANs, wireless LANs, cellular networks. TCP/IP protocol family. Network applications. New trends in computer communication networks.

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM242-MATE322

Abbreviated Title: Computer Networks
Course Teaching Language: Turkish

Category: Area Core Course

Keywords: Computer Networks

Department offering the course: Computer Engineering

16. BLGM353 Database Management Systems

This course introduces the student to the fundamentals of database management. Topics covered include: the Entity-Relationship model; the Relational model and its mathematical foundations; most important features of Structured Query Language (including basic structure, aggregate functions, nested queries, index definition, stored procedures and functions, views, database modification, domain constraints, assertions, triggers, transaction definition, data definition language, granting privileges, security), query languages Datalog and QBE; Object-Oriented and Object-Relational databases; design principles of Relational databases (normal forms, functional dependencies, decomposition).

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM231

Abbreviated Title: Database Management Systems Category: Area Core Course
Teaching Language: Turkish

Keywords: Database Management Systems

Department offering the course: Computer Engineering

17. BLGM371 Analysis of Algorithms

Definition and properties of Algorithms. Design, analysis, and representation of Algorithms. Data abstraction. Pseudo code conventions. Models of computation. Mathematical Foundations: Growth of functions, asymptotic notations. Study of recursive algorithms and associated recurrence relations (substitution method, iteration method, master method, recursion trees). Design paradigms for algorithms: Brute-Force (Exhaustive Search), Divide-and-Conquer (Merge Sort, Binary Search Tree) Dynamic Programming (Matrix-Chain multiplication, LCS-length, 01-Knapsack Problem). Greedy algorithms (Greedy Activity Selector, Fractional Knapsack Problem). Graph Algorithms: Representation of sets and graphs. Breadth-first search, depth-first search. Minimum spanning trees. Single-source shortest paths. All-pairs of shortest paths.

Credits: (4 / 0 / 1) 4
ECTS:6

Prerequisites: BLGM231

Abbreviated Title: Analysis of Algorithms Category: Area Core Course
Teaching Language: Turkish

Keywords: Analysis of Algorithms

Department offering the course: Computer Engineering

18. BLGM400 Summer Practice

As a part of the fulfillment of the graduation requirements, all students must complete 40 work days of summer training after the second and/or third year, during summer vacations. The summer training should be carried out in accordance with the rules and regulations set by the department. (3rd/4th year standing)

Credits: (0 / 0 / 0) 0
ECTS:1

Prerequisites: None

Abbreviated Title: Summer Practice Category: Faculty Core Course
Teaching Language: Turkish

Keywords: Summer Practice

Department offering the course: Computer Engineering

19. BLGM 405 Graduation Project I/II

The main aim of this course is to involve a student, as a team member and under the supervision of an instructor, in a preferably interdisciplinary capstone design project. The project, to be completed in BLGM406, includes a technical survey, the problem description and formulation, and detailed preliminary design documentation for the solution of a realistic computer engineering problem. It is an extended exercise in the professional application of the skills and experience gained in the undergraduate program. Students

form teams, and each team chooses exactly one topic proposed by course instructors, and is expected to present its progress in the form of reports and presentation, both during the semester and at the end of the semester.

Credits: (1 / 0 / 0) 1
ECTS:1

Prerequisites: None

Abbreviated Title: Graduation Project I/II
Teaching Language: Turkish

Category: Faculty Core Course

Keywords: Graduation Project I/II

Department offering the course: Computer Engineering

20. BLGM 406 Graduation Project II/II

This course is the sequel to BLGM405. It consists in the implementation of a realistic, preferably interdisciplinary, engineering capstone project emphasizing engineering design principles on a computer engineering topic. It is carried out by a team of students under the supervision of an instructor. The team must complete the detailed design and implementation of the preliminary design they started in the BLGM 405 course. It is an extended exercise in the professional application of the skills and experience gained in the undergraduate program. The team has to make a presentation and submit a detailed final report which documents the design, implementation and testing.

Credits: (3 / 0 / 1) 3
ECTS:8

Prerequisites: BLGM405

Abbreviated Title: Graduation Project II/II
Teaching Language: Turkish

Category: Faculty Core Course

Keywords: Graduation Project II/II

Department offering the course: Computer Engineering

21. BLGM 410 Principles of Programming Languages

Evolution of programming languages and concepts. Syntax and semantics of programming languages. Context-free grammars. Lexical analysis. Syntax analysis. Top-down vs. bottom-up parsing. LR parsing tables. Names, scope and lifetime. Expressions. Statements. Subprogram linkage. Stack implementation of subprogram calls. Parameter passing methods. Object oriented concepts. Implementation of inheritance: virtual method tables. Concurrency. Exception handling. Functional or Logic programming.

Credits: (4 / 1 / 0) 4
ECTS:7

Prerequisites: BLGM211

Abbreviated Title: Programming Languages
Teaching Language: Turkish

Category: Area Core Course

Keywords: programming languages

Department offering the course: Computer Engineering

22. BLGM 413 Compiler Construction

This area elective course mainly focuses on the following topics; Introduction to compilers, A simple onepass compiler, Lexical analysis, Syntactic specification of programming languages, The parsing problem, top-down and bottom-up parsing, Syntax-directed translation, Symbol tables, Run time environment and storage administration, Code generation and optimization, Compiler development.

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM211

Abbreviated Title: Compiler Construction
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Compiler Construction

Department offering the course: Computer Engineering

23. BLGM 414 Modern Programming Platforms

This course covers software development in various modern programming platforms for mobile application development and Internet application development. The fundamentals, graphical user interface design, database programming of each platform will be given in the course. Cloud database programming will also be given.

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM231

Abbreviated Title: Modern Programming Platforms
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Modern Programming Platforms

Department offering the course: Computer Engineering

24. BLGM 415 Visual Programming

The main concern of this course is to teach Graphical User Interface, event-driven programming and object-oriented programming for Windows and Internet environments with a visual programming language. Windows Presentation Foundation (WPF) Graphical User Interface, WPF Graphics and Multimedia, XML and XAML, Strings, and Database and Web Application development will also be introduced.

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM231

Abbreviated Title: Visual Programming
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Visual Programming

Department offering the course: Computer Engineering

25. BLGM416 Object-Oriented Programming and Graphical User Interfaces

The purpose of this course is to expose the Object Oriented Programming approach and its use in building Graphical User Interfaces. It will be done in fact through the presentation of the JAVA language. The student is to learn the language structure of JAVA, its object oriented aspect, the similarities and differences with C. He must also acquire a practical programming experience in Java through a number of exercises and projects. Concerning the applications of the language, we will focus on the implementation of Graphical User Interfaces as well as animation programs. Blueprints and a practical object oriented development methodology will be given for such applications.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM211

ECTS :6

Abbreviated Title: Object-Oriented Programming and Graphical User Interfaces

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Object-Oriented Programming and Graphical User Interfaces

Department offering the course: Computer Engineering

26. BLGM 417 Advanced Topics in C

New C99 Standard (ISO/IEC 9899:1999). Historical notes (ANSI C committee & Numerical C Extensions Group, NCEG), borrowings from C++, new keywords and new types, headers `stdint.h` and `inttypes.h`, implicit/explicit int type, conversion specifiers in functions `printf()` and `scanf()`, new preprocessor features, variable length arrays (VLA), designated initializers, declarations and executable statements within the block, etc. C Interfaces and Implementations. Memory management (automatic storage, static 7 storage, POD and non-POD objects, new and delete operators (C++) – examples of usage, guidelines for effective memory management). Key facts about pointers, using heap and stack, dynamic arrays, common memory usage errors, restricted pointers, pointers to functions, pointers to members (C++). Date and Time Library. Retrieving current time, breaking into tokens, time differences and time zones, measuring execution time. Traditional Error-handling methods. C-based Approaches to Handling Errors (`exit()/atexit()`, `assert()`, `return`, `setjmp()/longjmp()`). Reliability of the code. Exceptions and Assertions. Exceptions and Performance. Misuses of Exception Handling. Manual code optimization. Exceptions during construction and destruction (C++). Advanced Exception handling Techniques (C++). Rapid Sorting Techniques. Sorting Algorithms (fundamentals). Brief discussion of Insertion, Shell, Quick, etc. sorting techniques. Comparison and implementations.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM211

ECTS :6

Abbreviated Title: Advanced Topics in C

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Advanced Topics in C

Department offering the course: Computer Engineering

27. BLGM 418 Internet Programming

This is an advanced course for the tools, technologies, and languages used for the design and implementation of Web applications. Hypertext Markup Language (HTML), Cascading Style Sheets (CSS), Extensible Markup Language (XML), Extensible Stylesheet Language transformations (XSLT), JavaScript and AJAX are covered for programming on the client side. XML Web services, a scripting language (such as VB.Net and C#) and the corresponding Web application development environment, session tracking, and using database are covered for programming on the server side.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM353

Abbreviated Title: Internet Programming
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Internet Programming

Department offering the course: Computer Engineering

28. BLGM419 Mobile Application Development

This course is an introduction to mobile device programming that will cover the fundamental programming principles, software architecture and their development environments. Event-driven programming, object-oriented programming, graphical user interface design, database programming and developing Internet based applications for mobile devices will be the main topics of this course.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM211

Abbreviated Title: Mobile Application Development
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Mobile Application Development

Department offering the course: Computer Engineering

29. BLGM 421 Parallel Computer Architecture

This course discusses various processing techniques used to improve the performance of computing systems. MIPS architecture is considered as an example to Pipelined processing. Memory issues and cache memories are discussed, followed by main topics of parallel processing including taxonomy of parallel computers, interconnection schemes, single-bus MIMD's and networked MIMD's. Memory bottleneck, memory consistency models and cache coherence issues are also considered.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM325

Abbreviated Title: Parallel Computer Architecture
Course Teaching Language: Turkish

Category: Area Elective

Keywords: Parallel Computer Architecture

Department offering the course: Computer Engineering

30. BLGM 422 Microprocessor Systems

This unit aims to study the main aspects in microprocessor systems; Microprocessors: CISC and RISC microprocessor concepts. The Intel 80386 microprocessor: Addressing and memory, segmentation, and protection mechanisms. Tasking, virtual memory, and exceptions. The Motorola 68030 microprocessor: The user programming model. The 68030 supervisor state.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM224

Abbreviated Title: Microprocessor Systems
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Microprocessor Systems

Department offering the course: Computer Engineering

31. BLGM 423 Low End Embedded Systems

The objective of the course is to introduce the concept of Harvard + RISC architecture microcontrollers and design of low end embedded computing systems on typical applications including interrupts, timers, LCD and LED displays, keypads, a/d converters, rotary coders, stepper motors, serial and parallel communication interfacing. The design applications are introduced on a very widely used typical 16-bit embedded microcontroller unit. The scope of the course is the simple, distinct embedded system design with the applications in C and RISC assembly programming. The design/theory scale of the course is around 60/40.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM224

Abbreviated Title: Low End Embedded Systems
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Low End Embedded Systems

Department offering the course: Computer Engineering

32. BLGM 424 Introduction to Image Processing

Introduction to image processing, digital image fundamentals, image enhancement, image restoration, image analysis, segmentation, image compression.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM321

Abbreviated Title: Introduction to Image Processing
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Introduction to Image Processing

Department offering the course: Computer Engineering

33. BLGM 426 Digital Signal Processing

Course topics are as follows: Discrete-Time Signals, Discrete-Time Systems, Z-Transform, Frequency analysis of Continuous-Time and Discrete-Time Signals, Frequency Domain Sampling, The Discrete Fourier Transform (DFT), Efficient Computation of the DFT: FFT Algorithms, Realization of DiscreteTime Systems, Design of FIR and IIR digital Filters, Adaptive digital filtering applications. Course objective is to introduce the fundamentals of digital signal processing. The emphasis will be on analysis tools, the design of digital filters, and on the computation of the Discrete Fourier Transform (DFT). The theory developed in class will be confirmed by computer programming using MATLAB simulation package.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM321

ECTS :6

Abbreviated Title: Digital Signal Processing

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Digital Signal Processing

Department offering the course: Computer Engineering

34. BLGM 427 Hardware Realization of Algorithms

The course introduces students to the key ideas and concepts of fast hardware implementation of algorithms in contrast to software realization. The organization of designing hardware is studied including hardware description languages, hardware-oriented algorithms and CAD-systems for FPGA implementation. Active student participation is expected for the successful completion of this course. Students must attend the lectures regularly and are responsible for all the reading assignments, homework, quizzes and other materials discussed in class.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM224

ECTS :6

Abbreviated Title: Hardware Realization of Algorithms

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Hardware Realization of Algorithms

Department offering the course: Computer Engineering

35. BLGM 443 Real-time System Design

Course goal is to introduce students to key ideas, concepts and tools of Real-time systems design. Introduction to real-time systems, ADA programming, architecture and design of real-time systems, concurrent programming and synchronization, real-time scheduling, reliability and exception handling, real-time OS, and distributed real-time systems.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM242

ECTS :6

Abbreviated Title: Real-time System Design

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Real-time System Design

Department offering the course: Computer Engineering

36. BLGM 444 Data Communications

This course concentrates on the exchange of data between devices. The key aspects of transmission, interfacing, link control, and multiplexing will be examined. The course then will proceed with wide area networks in examining the internal mechanisms and user network interfaces that have been developed to support voice, data, and multimedia communications. The traditional technologies of packet switching and circuit switching will be examined, as well as the more recent ATM.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM344

ECTS :6

Abbreviated Title: Data Communications

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Data Communications

Department offering the course: Computer Engineering

37. BLGM 445 Internet Architecture and Protocols

An overview of the Internet architecture and its TCP/IP reference model. Protocols of the network layer. Addressing and routing datagrams in the Internet. Internet Control Message Protocol (ICMP) for dissemination of error and control messages. Transport layer, UDP and TCP protocols. Flow control and congestion control in TCP. Stream Control Transport Protocol (SCTP) for new applications. Routing protocols and communication between routers. Multicasting in the Internet and creation of multicast trees. Multicast routing protocols. Protocols for real-time applications. Voice and video over IP. Resource reservation and quality of service. IPv6 protocol and trends in the evolution of the Internet. Monitoring and managing IP networks with Simple Network Management Protocol (SNMP). Securing TCP/IP environments. Diagnostic tools and protocol analyzers for the Internet.

Credits: (4 / 1 / 0) 4

Prerequisites BLGM344

ECTS :6

Abbreviated Title: Internet Architecture and Protocols

Category: Area Elective Course

Teaching Language: Turkish

Keywords: Internet Architecture and Protocols

Department offering the course: Computer Engineering

38. BLGM 446 Networked computing

This course aims to give undergraduates the basic knowledge of network technologies and prepare students for a range of careers within this emerging area of the global networked computing industry. The course brings together information related to P2P systems, Grids and Web services. It will show how these technologies can be used in science, research and industry. The experience, obtained by students during this course is a prerequisite for any professional work related to the design, implementation and usage of the highly effective networked computing systems and distributed applications.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM344

Abbreviated Title: Networked computing
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Networked computing

Department offering the course: Computer Engineering

39. BLGM 447 Fiber Optic Computer Communication

This course will describe the basic principles of fiber optics, light propagation theories, attenuation of optical fibers, dispersion and dispersion compensation of fiber optics. In addition, optical fiber transmitters, receivers and fiber optic system design are also discussed. Finally, an introduction to fiber optic network is considered.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM344

Abbreviated Title: Fiber Optic Computer Communication
Course Teaching Language: Turkish

Category: Area Elective

Keywords: Fiber Optic Computer Communication

Department offering the course: Computer Engineering

40. BLGM451 Information Security

Information security requirements, security threats, attacks, and methods providing information protection, discretionary and mandatory access models. Malicious software. Symmetric and asymmetric cryptographic methods, DES, AES, RSA. Authentication, digital signature, certificates, one-time passwords, hash functions. Practical aspects of information security in operating systems, databases, network applications.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM353

Abbreviated Title: Information Security
Course Teaching Language: Turkish

Category: Area Elective

Keywords: Information Security

Department offering the course: Computer Engineering

41. BLGM 455 Security of Computer Systems & Networks

Computer systems and network security requirements, security threats, and attacks. Confidentiality, integrity, availability, assurance, authenticity, anonymity, nonrepudiation. Methods providing physical security, hardware, software, and information protection. Access control models, discretionary, mandatory, and role-based access models; Kerberos. Malicious software. Symmetric and asymmetric cryptographic methods, DES, AES, RSA, ECC. Authentication, digital signature, certificates, one-time passwords, hash functions. Key management. Link, network, and transport layers security. Wireless network security. Browser security. Ethical and legal issues.

Credits: (4 / 1 / 0) 4
ECTS:6

Prerequisites: BLGM211

Abbreviated Title: Security of Computer Systems & Networks Category: Area Core Course
Teaching Language: Turkish

Keywords: Security of Computer Systems & Networks

Department offering the course: Computer Engineering

42. BLGM 461 Artificial Intelligence

Definitions of AI from different point of views, intelligent agents and agent architectures, rational intelligent agents, how agents should act and environments of intelligent agents. Problem solving agents, formulating problems, and searching for solutions. Uninformed search strategies: BFS, DFS, DLFS, IDFS. Informed search methods: Greedy algorithms, uniform cost search, heuristic functions, A*-search, memory-bounded search, iterative improvement algorithms. Constraint satisfaction problems (CSPs): Definitions, Backtracking search for CSPs, The structure of SCPs. Adversarial search: Games, Optimal decisions in games. Alpha-Beta pruning. Agents that reason logically: knowledge-based agents, representation of knowledge, reasoning, logic, and inference in propositional logic. First-order logic: syntax and semantics, extensions and notational variations, elements of first order logic, and inference in first-order logic.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM231

Abbreviated Title: Artificial Intelligence Category: Area Elective Course
Teaching Language: Turkish

Keywords: Artificial Intelligence

Department offering the course: Computer Engineering

43. BLGM 462 Functional and Logic Programming

This course is about the two main declarative programming paradigms, namely functional and logic. Prolog will be taught as a representative of the Logic programming paradigm, and ML will be the language used to demonstrate the functional paradigm.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM211

Abbreviated Title: Functional and Logic Programming Category: Area Elective
Course Teaching Language: Turkish

Keywords: Functional and Logic Programming

Department offering the course: Computer Engineering

44. BLGM 466 Computer Graphics

Fundamentals of computer graphics. Topics include graphics hardware and software, basic raster graphics algorithms, 2D and 3D geometric transformations, 2D and 3D viewing, color and illumination models, texture mapping. Programming examples in C/C++ and OpenGL.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites BLGM211

Abbreviated Title: Computer Graphics
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Computer Graphics

Department offering the course: Computer Engineering

45. BLGM 471 Automata Theory

Mathematical preliminaries and basic concepts. Strings, Languages and Grammars. Chomsky hierarchy of grammars. Deterministic and nondeterministic finite automata. Equivalence of deterministic and nondeterministic finite automata. Minimization of finite automata. Regular grammars and regular expressions. Pushdown automata. Context free grammars. Chomsky normal form. Greibach normal form. Correspondence of pushdown automata and context free grammars. Introduction to Parsing.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites MATE163

Abbreviated Title: Automata Theory
Teaching Language: Turkish

Category: Area Core Course

Keywords: Automata Theory

Department offering the course: Computer Engineering

46. BLGM 474 Performance Analysis of Computer Systems and Networks

Queuing models of computer systems and networks and applications of queuing theory to computer network modeling. Bounds on system performance. Mean-value analysis of computer systems. Modeling specific subsystems. Queuing models for analysis. Limitations of queueing models. Analysis of transaction processors, terminal-oriented systems, and batch processing.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites MATE322

Abbreviated Title: Performance Analysis of Computer Systems and Networks
Category: Area Elective Course

Teaching Language: Turkish

Keywords: Performance Analysis of Computer Systems and Networks

Department offering the course: Computer Engineering

47. BLGM 475 Operations Research

This course focuses on: Linear programming. Solution techniques of linear programs. The transportation problem. Project scheduling by critical path method. Nonlinear programming. Integer programming.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites MATE241

Abbreviated Title: Operations Research
Teaching Language: Turkish

Category: Area Elective Course

Keywords: Operations Research

Department offering the course: Computer Engineering

48. BLGM 476 System Simulation

General concepts of systems. Discrete and continuous systems. State variables. Models, modeling and simulation of systems. Principles and techniques for system modeling and simulation. Comparison of analytical modeling and simulation modeling techniques. General structure of a simulation system. Probability aspects of simulation. Techniques and methods of generation of random numbers and random variates with the desired probability distribution. Simulation languages and packages. Transaction-oriented and event-oriented simulation. Queuing systems in simulation. Validation and verification of simulation models. Output (statistical) analysis and representation of simulation results.

Credits: (4 / 1 / 0) 4
ECTS :6

Prerequisites MATE322

Abbreviated Title: System Simulation
Teaching Language: Turkish

Category: Area Elective Course

Keywords: System Simulation

Department offering the course: Computer Engineering

Course Descriptions – II - English : All compulsory courses offered by other academic units

1. MATE151 Calculus - I

Limits and continuity. Derivatives. Rules of differentiation. Higher order derivatives. Chain rule. Related rates. Rolle's and the mean value theorem. Critical Points. Asymptotes. Curve sketching. Integrals. Fundamental Theorem. Techniques of integration. Definite integrals. Application to geometry and science. Indeterminate forms. L'Hospital's Rule. Improper integrals. Infinite series. Geometric series. Power series. Taylor series and binomial series.

Credits: (4 / 0 / 1) 4
ECTS:7

Prerequisites: None

Abbreviated Title: Calculus I
Teaching Language: Turkish

Category: Faculty Core Course

Keywords: calculus

Department offering the course: Mathematics

2. MATE152 Calculus - II

Vectors in R^3 . Lines and Planes. Functions of several variables. Limit and continuity. Partial differentiation. Chain rule. Tangent plane. Critical Points. Global and local extrema. Lagrange multipliers. Directional derivative. Gradient, Divergence and Curl. Multiple integrals with applications. Triple integrals with applications. Triple integral in cylindrical and spherical coordinates. Line, surface and volume integrals. Independence of path. Green's Theorem. Conservative vector fields. Divergence Theorem. Stokes' Theorem.

Credits: (4 / 0 / 1) 4

Prerequisites: MATE151

ECTS:7

Abbreviated Title: Calculus II

Category: Faculty Core Course

Teaching Language: Turkish

Keywords: limit, continuity, derivative, asymptotes, integral, infinite series.

Department offering the course: Mathematics

3. MATE163 Discrete Mathematics

Set theory, functions and relations; introduction to set theory, functions and relations, inductive proofs and recursive definitions. Combinatorics; basic counting rules, permutations, combinations, allocation problems, selection problems, the pigeonhole principle, the principle of inclusion and exclusion. Generating functions; ordinary generating functions and their applications. Recurrence relations; homogeneous recurrence relations, inhomogeneous recurrence relations, recurrence relations and generating functions, analysis of algorithms. Propositional calculus and boolean algebra; basic boolean functions, digital logic gates, minterm and maxterm expansions, the basic theorems of boolean algebra, simplifying boolean function with karnaugh maps. Graphs and trees; adjacency matrices, incidence matrices, eulerian graphs, hamiltonian graphs, colored graphs, planar graphs, spanning trees, minimal spanning trees, Prim's algorithm, shortest path problems, Dijkstra's algorithms.

Credits: (3 / 0 / 1) 3

Prerequisites: None

ECTS:5

Abbreviated Title: Discrete Mathematics

Category: Area Core

Course

Teaching Language: Turkish

Keywords: set, function, relation, permutation, combination, pigeonhole principle, principle of inclusion and exclusion, recurrence relations, Boolean algebra, graph, tree.

Department offering the course: Mathematics

4. MATE241 Linear Algebra and Ordinary Differential Equations

Linear Algebra; Matrix algebra, special matrices and row operations, Gaussian elimination method, determinants, adjoint and inverse matrices, Cramer's rule, linear vector spaces, linear independence, basis and dimension. First order ordinary differential equations; definitions and general properties of solutions, separable, homogeneous and linear equations, exact equations and integration factors. Higher order equations with constant coefficients; Basic theory and the method of reduction of order, second order homogeneous equations with constant coefficients, nonhomogeneous equations, the

method of undetermined coefficients, the method of variation of parameters, the Cauchy-Euler equations. Power series solutions; classification of points, ordinary and singular points, power series solutions about ordinary points, power series solutions about regular singular points, the method of Frobenius. Systems of differential equations; general properties of constant coefficient systems, eigenvalues and eigenvectors, diagonalizable matrices, solutions of linear systems with constant coefficients. Boundary value problems.

Credits: (4 / 0 / 1) 4
ECTS:6

Prerequisites: MATE151

Abbreviated Title: Differential Equations
Teaching Language: Turkish

Category: Area Core Course

Keywords: linear algebra, differential equations

Department offering the course: Mathematics

5. MATE322 Probability and Statistical Methods

Introduction to probability and statistics. Operations on sets. Counting problems. Conditional probability and total probability formula, Bayes' theorem. Introduction to random variables, density and distribution functions. Expectation, variance and covariance. Basic distributions. Joint density and distribution function. Descriptive statistics. Estimation of parameters, maximum likelihood estimator. Hypothesis testing.

Credits: (3 / 0 / 1) 3
ECTS:5

Prerequisites: MATE151

Abbreviated Title: Probability & Statistics
Teaching Language: Turkish

Category: Faculty Core Course

Keywords: conditional probability, random variable, expectation, distribution function, statistics.

Department offering the course: Mathematics

6. MATE373 Numerical Analysis for Engineers

Numerical error. Solution of nonlinear equations, and linear systems of equations. Interpolation and extrapolation. Curve fitting. Numerical differentiation and integration. Numerical solution of ordinary differential equations.

Credits: (3 / 0 / 1) 3
ECTS:5

Prerequisites: MATE241

Abbreviated Title: Numerical Analysis for Eng
Teaching Language: Turkish

Category: Area Core Course

Keywords: numerical error, nonlinear equation, linear system of equations, interpolation, extrapolation, numerical differentiation, numerical integration.

Department offering the course: Mathematics

7. FIZK103 Physics - I

Physical quantities and units. Vector calculus. Kinematics of motion. Newton's laws of motion and their applications. Work-energy theorem. Impulse and momentum. Rotational kinematics and dynamics. Static equilibrium.

Credits: (4 / 1 / 0) 4

Prerequisites: None

ECTS:7

Abbreviated Title: Physics I

Category: Faculty Core Course

Teaching Language: Turkish

Keywords: Physics

Department offering the course: Physics

8. FIZK104 Physics - II

Kinetic theory of ideal gases. Equipartition of energy. Heat, heat transfer and heat conduction. Laws of thermodynamics, applications to engine cycles. Coulombs law and electrostatic fields. Gauss's law. Electric potential. Magnetic field. Amperes law. Faradays law.

Credits: (4 / 1 / 0) 4

Prerequisites: None

ECTS:7

Abbreviated Title: Physics II

Category: Faculty Core Course

Teaching Language: Turkish

Keywords: Physics

Department offering the course: Physics

9. ENGL171 Communication in English – I

ENGL171 is a first semester Basic Academic English course for students at the Faculty of Engineering. The purpose of the course is to introduce students to writing, reading, speaking and listening in academic settings as well as provide an introduction to appropriate study skills.

Credits: (3 / 0 / 1) 3

Prerequisites: None

ECTS:5

Abbreviated Title: Communication in English – I

Category: University Core

Course Teaching Language: English

Keywords: English language teaching

Department offering the course: School of Foreign Language

10. ENGL172 Communication in English – II

ENGL172 is a second semester Basic Academic English course for students at the Faculty of Engineering. As expressed in the European Common Language Teaching Policy (CEFR), ENGL 191 is organized so that the students can achieve the B2 level in English language skills. The

purpose of the course is to further develop students' writing, reading, speaking and listening skills in academic settings and to improve their study skills.

Credits: (3 / 0 / 1) 3
ECTS:5

Prerequisites: ENGL171

Abbreviated Title: Communication in English – II
Course Teaching Language: English

Category: University Core

Keywords: English language teaching

Department offering the course: School of Foreign Language

11. ENGL203 Communications Skills

EFL 201/203/205 is a second year Basic/Mainstream/Advanced Communication Skills course for students at the Faculty of Engineering. The course aims to introduce a range of skills, including effective written and oral communication, research skills and study skills. Throughout the course the students will be involved in project work intended to help them in their immediate and future academic and professional life. This will include library research, technical report writing and an oral presentation. By investigating a topic of their own choice, students will develop their understanding of independent research skills. During the report writing process, students will improve their writing and develop the ability to produce organized, cohesive work. The oral presentation aims to enhance spoken fluency and accuracy and provide training in the components of a good presentation.

Credits: (3 / 0 / 1) 3
ECTS:4

Prerequisites: ENGL172

Abbreviated Title: Communications Skills
Teaching Language: English

Category: Area Core Course

Keywords: English language teaching

Department offering the course: School of Foreign Language

12. HIST280 History of Turkish Reforms

The aim of this course is to teach students under what conditions the Republic of Turkey was established; to make students understand the principles of Atatürk's reforms; the phases of the Reforms; Atatürk as a military hero and a statesman; Atatürk's concept of nationalism that defies racism; Atatürk's attempts to maintain global peace based on causes and effects; the relations between the Turkish Republic and the establishment of the Turkish Republic of Northern Cyprus; Turkish Cypriot years of national strife. This is a general education course

Credits: (2 / 0 / 0) 2
ECTS:2

Prerequisites: None

Abbreviated Title: History of Turkish Reforms
Teaching Language: Turkish

Category: University Core Course

Keywords: history, Turkish reforms.

Department offering the course: Centre of Atatürk Investigations

13. IENG356 Ethics in Engineering

This course is designed to introduce moral rights and responsibilities of engineers in relation to society, employers, colleagues and clients. Analysis of ethical and value conflict in modern engineering practice. Importance of intellectual property rights and conflicting interests. Ethical aspects in engineering design, manufacturing and operations. Cost benefit-risk analysis, safety and occupational hazard considerations.

Credits: (3 / 0 / 0) 3

Prerequisites: None

ECTS:4

Abbreviated Title: Ethics

Category: Area Core Course

Teaching Language: Turkish

Keywords: ethics

Department offering the course: Industrial Engineering

14. IENG451 Industrial Management

The objective of this course is to equip engineers with the necessary modern managerial skills, which are essential to increase productivity in organizations through employee empowerment and effective communication, to develop plans that will put the organization ahead of the international marketing game, to overcome obstacles to personal and professional growth, to attain organizational strategic goals, and to develop action plans for organizational change.

Credits: (3 / 0 / 0) 3

Prerequisites: None

ECTS:5

Abbreviated Title: Engineering Economy

Category: University Elective Course

Teaching Language: Turkish

Keywords: engineering management

Department offering the course: Industrial Engineering
